

# Yilun Song (Kenneth)

Software Engineering

## TECHNICAL SKILLS

### Programming Language

- HTML5/CSS/JavaScript
- Java
- Python & Perl
- MySQL
- Mongo DB
- C

### Experienced Areas

- Web applications
- Cross-platform mobile App
- Android mobile App
- Scripts and Tests
- GUI development

### Libraries & Utilities

- ReactJS
- React Native
- JQuery
- Websocket
- Bootstrap
- GWT

## EDUCATION

University of British Columbia

*Bachelor of Applied Science – Software Engineering*

Overall GPA: 3.95/4.33 (A)

Date of graduation: May, 2017

## CO-OP WORK EXPERIENCE

Cumul8 Technologies Inc.

*Front End Developer (Data Visualization, ReactJS, React Native, Html, Css)*

May, 2015 – December, 2015

- Built complex **data visualization** related web components using **React** and **Flux**
- Added real time updating feature using **Websocket**
- Fixed bugs on the back-end side written in **Go** language
- Built front-end screens for a mobile app using **React Native**

Broadcom Corporation

*Test Script Developer & Engineering Testing Assurance (Tcl, Perl, Git)*

August, 2014 – April, 2015

- Developed **automated test scripts** for nightly regression tests to have the requirements of our products automatically tested
- Run and Reported nightly regression test results in a daily basis to report software bugs to the development team
- Developed scripting tools to automatically parse our test results with no manual efforts
- Learned new language Tcl and Perl to be able to write automated test scripts independently

UBC ECE– Cisco LLFI fault injection tool

*GUI Developer (JAVA, Python, & C++)*

May, 2014 – August, 2014

- Expanded features on the GUI tool using **JavaFX** to make it simple and easy to use
- Developed and edited existing scripts of the LLFI tool to support more features
- Added informative instructions and notifications in the GUI to make the product user-friendly
- Developed scripts in Python to automate some duplicated work

## TECHNICAL PROJECTS

UBC LLFI Web Service – Personal Project

*Full Stack Developer (React, JQuery, NodeJS)*

September, 2016 – Present

- Building a web application using **React** from scratch for a UBC research project LLFI
- Designed the architecture of the application in a modular way and followed RESTful API standards
- Implementing the **back-end** server that executes scripts for front-end requests using **NodeJS**

**Reach Social Mobile App – School Project & Contract Project  
Mobile App Developer (React Native, Android & iOS)**

**September, 2016 – Present**

- Building a **cross-platform** app from scratch for a start-up company using **React Native** that provides the ability to do different class activities for students
- Built a self-explanatory modular **architecture**
- Built the data flow system using **Reflux**
- Developing key features of the app, e.g. chat room, file sharing, etc.
- Mentoring other team members to learn React Native and the related techniques used in this project
- Organizing the team work and make sure the product can be delivered on time

**Website Development – Personal Project**

**July, 2016 – August, 2016**

**Front End Developer (React, Bootstrap, JQuery, Html, Css, Js)**

- Built and designed my portfolio website with React (Link: <http://syltaxue.com>)
- Built a website for a BC registered non-profit organization (Link: <http://lovecaravan.ca>)
- Gained experience on the full life cycle of website development and hosting

**Security Camera Android App – School Project**

**March, 2013 – May, 2013**

**Android Developer (Java)**

- Designed a security camera **android app** that can control a remote RaspberryPi camera through Wi-Fi network as well as streaming the video from the camera
- Designed the UI of the app, analyzed the users' habits about how they want to use the app, taking care of the relationship between each activity
- Implemented and designed the XML file of each activity page
- Initiated team activities, helped the team to allocate the workload, and ensured the delivery of the project

## **AWARDS**

**Work Learn International Undergraduate Research Award** – awarded to 5 international students at UBC each year (same as NSERC).

**2014**

**UBC Engineering Dean's Honor List** – for students with a GPA of at least A- each year

**2011 – 2016**

## **ACTIVITIES AND INTERESTS**

- Passionate and enthusiastic about programming. I transferred from Electrical Engineering to Computer Engineering after I found my passion in programming.
- Interested in big data and cloud computing areas (data mining, machine learning, and data visualizations). I think there will be tons of smart devices and apps that will provide personalized service in the future.
- I am a fast learner, I taught myself a lot of programming languages, and learned many new languages in my previous work. I can quickly catch up the required technical skills that I do not have or the ones that I have not touched for a long time.
